Project description : this is a simulation of a mobile application through which users can access, save,
share and apply for opportunities in STEM

the program is made of three classes; the user class, admin and main class
user class; backend for the user that shows the user dash board, user name
admin class; admin backend
main program ; front end or user interface is the front end of the application
The user logs in with his name and password and is able to use the app to search for any option he wants same as the admin

packages and libraries used;
1. javax. swing ; for Graphical user interface
2. JOption; message dialogs

This is the link to Github where the codes can be found
